Vladislav
Parsenyuk

Front-end Software Engineer

4 years experience

ABOUT ME

Currently a permanent resident of the United States, I've come a long way from Ukraine - my native country. Yet being only 29 years old, I can speak English, Russian and Ukrainian. I'm attached to photography, art in all forms, and I can go on about traveling, discovering new cultures, traditions, mindsets, and amazing views of nature and architecture.

Exudation-wise, I have a reputable Master's degree in Economics, but my heart has always belonged to mathematics and sciences. This desire carried me away into programming as the apogee of digital art. What I enjoy about my work is that it is an opportunity to create something new and extraordinary.

SKILLS

JavaScript   ES6   React   D3   jQuery   CSS

HTML   JSON   SVG   Canvas   Bootstrap

Moment   Polymer   Backbone   Require   Node

NPM   Gulp   Express   TypeScript   ASP.NET

PHP   GIT   SVN   JIRA   Sketch   Photoshop

PROJECTS

DEMOS decidetreatment.org

📅 Jun 2014 — Present

Initiated by the Norwegian Research Council and supported by the Ministry of Health and the Health Authorities of Norway, it is a cloud-based platform and authoring suite, enabling the construction of a wide array of patient-centered decision support systems including health and treatment optimization.

The platform was used to construct a health optimization system enabling patients with bipolar disorder, their healthcare providers and caretakers to collaborate on the assessment, selection, adjustment and systematic follow-up of treatment use and lifestyle measures.

I was the only front-end developer on the project, and the entire visual aspect was developed by me.

YooDo

📅 May 2014 — Jun 2014

This web application allows users to combine all people who were present at an event, and enables them to upload a lot of photos and

videos from this event or celebration and then create a large video clip, with the opportunity to edit and customize every single step.

While the largest part wasn't done by myself, it was an excellent experience to take part in such kind of project and team.

MakeMeSmart

📅 Sep 2013 — Apr 2014

An educational project that contains hundreds of pages on the theme of algebra, geometry, and so on.

Being my first full-scale project, I managed to do and pull off everything from the ground on up, including all layouts, design, graphics, animations, content, and all other stages of development, setting up and running.

FEEDBACKS

Nadia
Korobchuk
Project manager

Vlad is a very creative developer with an ability to think outside the box. Being a real perfectionist who is never satisfied with temporary or even good enough solutions, he is very good at suggesting new ideas with a strong structured logical basis. Having him in our team greatly benefited the project and there was always assurance in the quality of his work. Also he is a true team player who is really fun to work with.

Vladislav worked full time on the "Demos" project from 2014 to 2017. During these years he was the only front-end developer on the project. He contributed to this work in a way that repeatedly surpassed expectations. He has been a reliable, creative, diligent and good-humored team member, with very good programming and problem-solving skills. In the team, he has been a stable force, is on good terms and collaborates well with all team members, and is one of the main contributors to a positive atmosphere. He works well under pressure and has very useful abilities in finding new and creative solutions. I have been fully satisfied with his work and can recommend him whole-heartedly.
